Reperfusion Checklist

The Reperfusion Checklist is an important component in the initial evaluation, treatment, and transport of patients suffering from an acute ST-elevation myocardial infarction (STEMI) or acute Stroke. Both of these conditions can be successfully treated using fibrinolysis (thrombolytics) if the patient arrives at the appropriate hospital within the therapeutic window of time.

This form should be completed for all acute STEMI and acute Stroke patients.

Patient’s Name: ____________________________________________________________

PCR Number:______________________  Date: ____________________________

1. Has the patient experienced chest discomfort for greater than 15 minutes and less than 12 hours?
   □ Yes  □ No

2. Has the patient developed a sudden neurologic deficit with a positive Los Angeles Prehospital Stroke Screen?
   □ Yes  □ No

3. Are there any contraindications to fibrinolysis?
   If any of the following are checked “Yes”, fibrinolysis MAY be contraindicated.
   □ Yes  □ No  Systolic Blood Pressure greater than 180 mm Hg
   □ Yes  □ No  Diastolic Blood Pressure greater than 110 mm Hg
   □ Yes  □ No  Right vs. Left Arm Systolic Blood Pressure difference of greater than 15 mm Hg
   □ Yes  □ No  History of structural Central Nervous System disease (tumors, masses, hemorrhage, etc.)
   □ Yes  □ No  Significant closed head or facial trauma within the previous 3 months
   □ Yes  □ No  Recent (within 6 weeks) major trauma, surgery (including laser eye surgery), gastrointestinal bleeding, or severe genital-urinary bleeding
   □ Yes  □ No  Bleeding or clotting problem or on blood thinners
   □ Yes  □ No  CPR performed greater than 10 minutes
   □ Yes  □ No  Currently Pregnant
   □ Yes  □ No  Serious Systemic Disease such as advanced/terminal cancer or severe liver or kidney failure.

4. (STEMI Patients Only) Does the patient have severe heart failure or cardiogenic shock? These patients may benefit more from a percutaneous coronary intervention (PCI) capable hospital.
   □ Yes  □ No  Presence of pulmonary edema (rales greater than halfway up lung fields)
   □ Yes  □ No  Systemic hypoperfusion (cool and clammy)

If any contraindication is checked as “Yes” and an acute Stroke is suspected by exam or a STEMI is confirmed by ECG, activate the EMS Stroke Plan or EMS STEMI Plan for fibrinolytic ineligible patients. This may require the EMS Agency, an Air Medical Service, or a Specialty Care Transport Service to transport directly to an specialty center capable of interventional care within the therapeutic window of time.
