Pearls
- If first intubation attempt fails, make an adjustment and then consider:
  - Different laryngoscope blade
  - Gum Elastic Bougie
  - Different ETT size
  - Change cricoid pressure
  - Apply BURP maneuver (Push trachea Back [posterior], Up, and to patient's Right)
  - Change head positioning
- Continuous pulse oximetry should be utilized in all patients with an inadequate respiratory function.
- Continuous EtCO2 should be applied to all patients with respiratory failure or to all patients with advanced airways.
- Notify Medical Control AS EARLY AS POSSIBLE about the patient's difficult / failed airway.

No More Than Three (3) Attempts Total

Two (2) failed intubation attempts by most proficient technician on scene or anatomy inconsistent with intubation attempts.

If first intubation attempt fails, make an adjustment and then consider:
- Different laryngoscope blade
- Gum Elastic Bougie
- Different ETT size
- Change cricoid pressure
- Apply BURP maneuver (Push trachea Back [posterior], Up, and to patient's Right)
- Change head positioning
